SUMMARY

Security-minded Backend Engineer with strong fundamentals in clean architecture, database design, and scalable infrastructure. Proficient in building robust API services, implementing role-based access controls, and managing cloud deployments. Experienced with Python, Node.js, SQL, and Docker, with a deep understanding of CI/CD pipelines and infrastructure as code. Driven by high accountability and business context, seeking to build from first principles in high-growth, regulated environments like fintech.

EDUCATION

Information Technology Institute (ITI) <i>Full-Stack Web Development with PHP — Graduation Project Grade: Excellent</i>	New Capital, Egypt <i>Jul. 2025 – Jan. 2026</i>
Eastern Mediterranean University (EMU) <i>Bachelor's Degree in Computer Engineering — GPA: 3.1 (Honor)</i>	Northern Cyprus <i>Sep. 2018 – May 2024</i>

EXPERIENCE

Junior Backend Engineer <i>PayStream Tech (Startup)</i>	Feb. 2026 – Jun. 2026 <i>Cairo, Egypt</i>
- Designed and implemented scalable backend services using Python/FastAPI and PostgreSQL, improving overall transaction processing reliability. - Collaborated with engineering and product teams to map complex business requirements into clean, layered architectural patterns for financial APIs. - Proactively monitored system health, identifying database bottlenecks and optimizing queries to ensure consistent latency under load.	
Junior Software Engineer (Backend) <i>DataVault Solutions (Startup)</i>	Jan. 2025 – Jun. 2025 <i>Cairo, Egypt</i>
- Engineered robust backend infrastructure and managed relational databases for a highly secure user management and authentication system. - Implemented comprehensive role-based access control (RBAC) and security-minded integrations, adhering to strict compliance and auditing standards. - Contributed to infrastructure-as-code and automated CI/CD workflows, accelerating the release cycle without sacrificing code quality or stability.	
Backend / Site Reliability Intern <i>CloudScale Networks</i>	Sep. 2024 – Dec. 2024 <i>Cairo, Egypt</i>
- Administered and scaled backend infrastructure, maintaining 99% uptime and rapidly diagnosing service disruptions in a fast-paced environment. - Managed CI/CD deployment pipelines and designed automated backup strategies, establishing strong engineering best practices and recovery protocols.	
Backend Developer Intern <i>Hala Ticaret Ltd.</i>	May 2024 – Jul. 2024 <i>Northern Cyprus</i>
- Developed serverless backend architectures and managed databases for a high-traffic e-commerce platform handling sensitive user data. - Implemented secure API endpoints and resilient integrations, supporting order processing and real-time updates while ensuring system availability.	

PROJECTS

Multi-Tenant ERP Platform — Backend Architecture <i>Python 3.12, FastAPI, MariaDB 11.4, SQLAlchemy 2.x, Alembic, Docker</i>	May 2026
- Architected a scalable backend serving multiple tenants with strict data isolation, robust RBAC (10 permission codes, 5 roles), and comprehensive audit logging. - Designed a complex relational database schema utilizing 14 stored procedures, 6 functions, 8 views, and 8 triggers to securely enforce core business logic at the data layer. - Containerized the full application stack with Docker Compose and managed version-controlled schema migrations with Alembic for reliable, zero-downtime deployments.	
SyncFlow Collaborative Workspace — Cloud Infrastructure	June 2026

PHP 8.3, Laravel 11, MySQL 8.0, AWS (EC2, S3, RDS), GitHub Actions

- Built a secure RESTful API backend, implementing token-based authentication (Sanctum) and a normalized MySQL schema with composite indexes to optimize complex filtering queries.
- Established a robust DevOps pipeline utilizing GitHub Actions for automated CI/CD, deploying the application securely across AWS EC2 and RDS instances.
- Integrated AWS S3 for reliable file storage and implemented scheduled background jobs for automated system updates and data processing.

Ketabi E-Commerce — Fintech Integrations

Oct. 2025 – Nov. 2025

Node.js, Express.js, MongoDB, AWS, Swagger, Stripe, Paymob, Postman

- Engineered secure payment flows and webhook logic for multi-vendor order processing, stock management, and refund handling using Stripe and Paymob integrations.
- Developed optimized backend modules for cart and order management, prioritizing compliance-friendly data handling and transactional integrity.
- Managed version control, code reviews, and fast-paced collaborative development cycles within a 5-member engineering team.

Dawarly Job Matching Platform — Data Engineering

Dec. 2025 – Jan. 2026

Python, FastAPI, PostgreSQL, pgvector, Node.js, Docker, AWS (EC2, S3)

- Built a robust backend pipeline automating data ingestion from external APIs and managing large-scale vector storage in a pgvector-backed PostgreSQL database.
- Deployed reliable infrastructure on AWS EC2 via GitHub Actions CI/CD, incorporating scheduled cleanup jobs to maintain optimal database performance and query speed.

TECHNICAL SKILLS

Backend & Languages: Python, Node.js, PHP, TypeScript, SQL, Bash

Frameworks: FastAPI, Express.js, Laravel 11

Databases: PostgreSQL, MySQL, MariaDB, MongoDB, SQLite, SQLAlchemy, Alembic

Infrastructure & Cloud: AWS (EC2, S3, RDS), Docker, Docker Compose, Linux Administration

DevOps & Security: GitHub Actions (CI/CD), Infrastructure as Code (IaC), Site Reliability, RBAC, Webhooks, Compliance integrations

Architecture: Clean Architecture, Layered Abstractions, RESTful API Design, Microservices, System Optimization
